

# Implicit model

CPU,  $O(1)$  registers

$O(\log n)$  bits or atomic elements

atomic elements

$$\text{Complexity} = \begin{cases} \# \text{ reads} \\ + \# \text{ writes} \\ + \# \text{ instructions performed} \end{cases}$$

# Sorting

		Comparisons	Data moves/writes	Implicit
Implicit priority queue	HeapSort	$O(n \cdot \log n)$	$O(n \cdot \log n)$	Yes
	SelectionSort	$O(n^2)$	$O(n)$	Yes
	SearchTree	$O(n \cdot \log n)$	$O(n)$	No
	[FG05]	$O(n \cdot \log n)$	$O(n)$	Yes

[G. Franceschini, V. Geffert, *An in-place sorting with  $O(n \log n)$  comparisons and  $O(n)$  moves*, J.ACM, 52(4), 515-537, 2005]

# Search trees

	Search & updates	Range searching	Implicit	Cache-oblivious
Red-black, ...	$O(\log n)$	$O(\log n + t)$	No	No
Sorted array (no updates)	$O(\log n)$	$O(\log n + t)$	Yes	No
[FG02]	$O(\log n)$	$O(\log n + t)$	Yes	No
[FG03]	$O(\log n)$	-	Yes	Yes
[BFJ02], ...	$O(\log n)$	$O(\log n + t)$	No	Yes

[G. Franceschini, R. Grossi, *Optimal Cache-Oblivious Implicit Dictionaries*, Proc. 30th International Colloquium on Automata, Languages, and Programming, volume 2719 of Lecture Notes in Computer Science, 316-331, Springer-Verlag, 2003.]

[G. Franceschini, R. Grossi, J.I. Munro, L. Pagli. *Implicit B-trees: New results for the dictionary problem*. IEEE Symposium on Foundations of Computer Science, 145-154, 2002]

# The fundamental implicit trick

- The relative two elements  $x < y$ , can encode a bit

$$\begin{array}{|c|c|} \hline x & y \\ \hline \end{array} = 0$$

$$\begin{array}{|c|c|} \hline y & x \\ \hline \end{array} = 1$$

- $2 \log n$  elements can encode integer  $\{0, \dots, n-1\}$

# Search trees

Search & updates  
 $O(\log^2 n)$

Range searching  
 $O(\log^2 n + t)$

Implicit  
 Yes

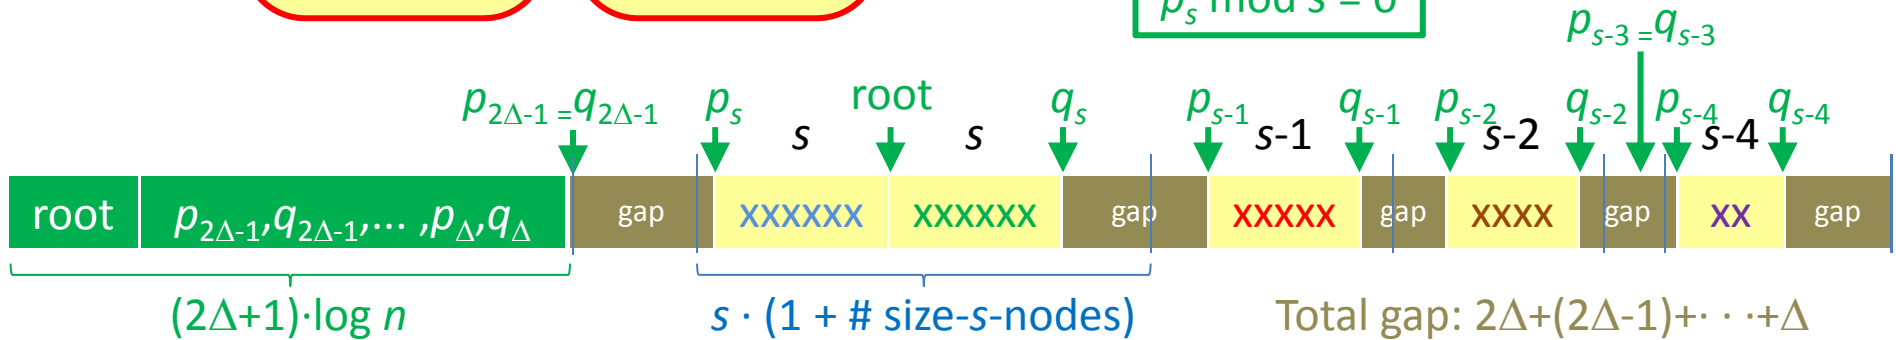

[J. Ian Munro, *An Implicit Data Structure Supporting Insertion, Deletion, and Search in  $O(\log^2 n)$  Time*, Journal of Computer and System Sciences, 33(1), 66-74, 1986]

Each nodes stores  $\Delta..2\Delta-1$  elements encoding the below fields ( $\Delta=8 \cdot \log n+2$ )

field	values	encoded by #elements
left (address)	$0, 1, \dots, n-1$	$2 \cdot \log n$
right (address)	$0, 1, \dots, n-1$	$2 \cdot \log n$
parent(address)	$0, 1, \dots, n-1$	$2 \cdot \log n$
color (red/black)	0,1	2
node size $s$	$0, 1, \dots, n-1$	$2 \cdot \log n$

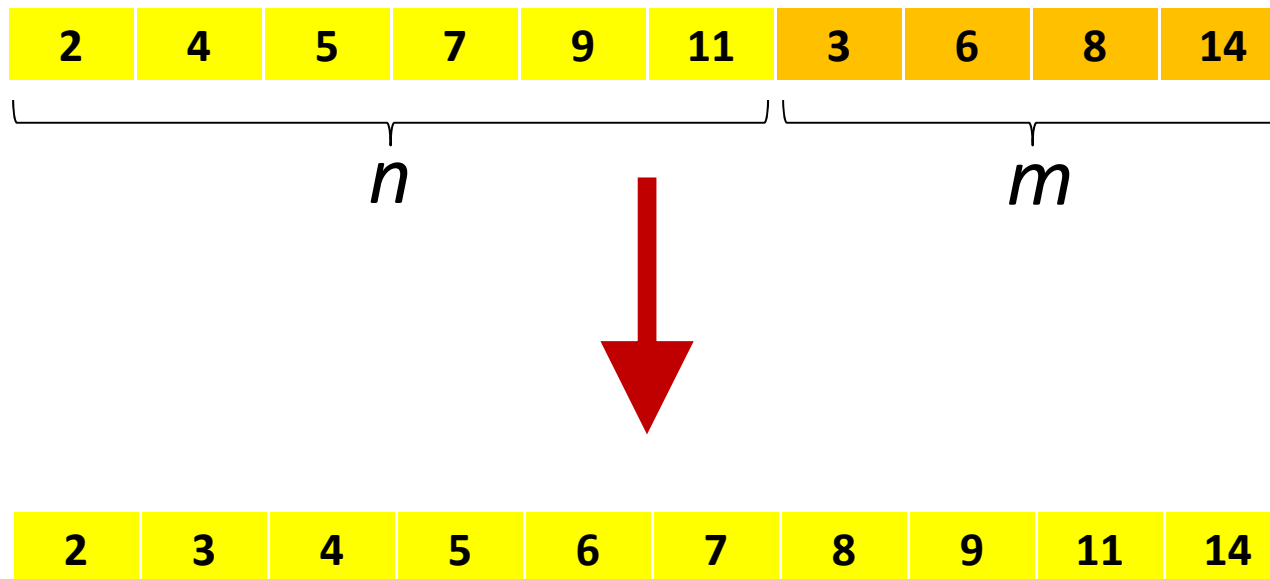

$$p_s \bmod s = 0$$

= arbitrary elements

# Implicit merging $O(n + m)$

- can be used in an implicit  $O(n \cdot \log n)$  MergeSort

(Honours project 2)
